1. INTRODUCTION

The Federal Transit Administration (FTA) and Northern Indiana Commuter Transportation District (NICTD) are conducting the environmental review process for the West Lake Corridor Project (Project) in Lake County, Indiana, and Cook County, Illinois, in accordance with the National Environmental Policy Act (NEPA) and other regulatory requirements. A Draft Environmental Impact Statement (DEIS) is being prepared as part of this process, with the FTA as the Federal Lead Agency and NICTD as the Local Project Sponsor responsible for implementing the Project under NEPA.

1.1 Purpose of Report

To evaluate the impacts that hazardous materials may cause to the proposed Project, an Environmental Site Assessment (ESA) process was conducted, which began with an ESA Screening. The ESA Screening included a database review of current state and federal environmental regulatory information and a visual inspection to confirm locations of parcels of concern identified by the database review and to identify parcels of concern not included in the database information. The ESA Screening was performed as a limited-scope Phase I ESA to document the parcels of concern within the Study Area and to identify land use related to historic and current involvement with hazardous materials/waste and/or petroleum products.

This report presents the results of AECOM's limited-scope Phase I ESA for the proposed Project. The potential environmental impacts and appropriate mitigation measures are identified herein in accordance with applicable portions of the American Society for Testing and Materials ASTM International (ASTM) Standard Practice Designation E 1527-13 for ESAs described in **Chapter 3**.

1.2 Project Overview

The environmental review process builds upon NICTD's prior West Lake Corridor studies that examined a broad range of alignments, technologies, and transit modes. The studies concluded that a rail-based service between the Munster/Dyer area and Metra's Millennium Station in downtown Chicago, shown on **Figure 1-1**, would best meet the transportation needs of the Northwest Indiana area. Thus, NICTD advanced a "Commuter Rail" Alternative for more detailed analysis in the DEIS. NEPA also requires consideration of a "No Build" Alternative to provide a basis for comparison to the Commuter Rail Alternative. In addition, a number of design variations are being considered related to alignment, stations, parking, and maintenance and storage facilities (see **Figure 1-2**).

1.2.1 No Build Alternative

The No Build Alternative is defined as the existing transportation system, plus any committed transportation improvements included in the Northwestern Indiana Regional Planning Commission's (NIRPC) *2040 Comprehensive Regional Plan* (CRP) (NIRPC 2011) and Chicago Metropolitan Agency for Planning's (CMAP) *GO TO 2040 Comprehensive Regional Plan* (CMAP 2014) through the planning horizon year 2040. It also includes capacity improvements to the existing Metra Electric District's (MED) line and Millennium Station, documented in NICTD's *20-Year Strategic Business Plan* (NICTD 2014).

Figure 1-1 Regional Setting for West Lake Corridor Project

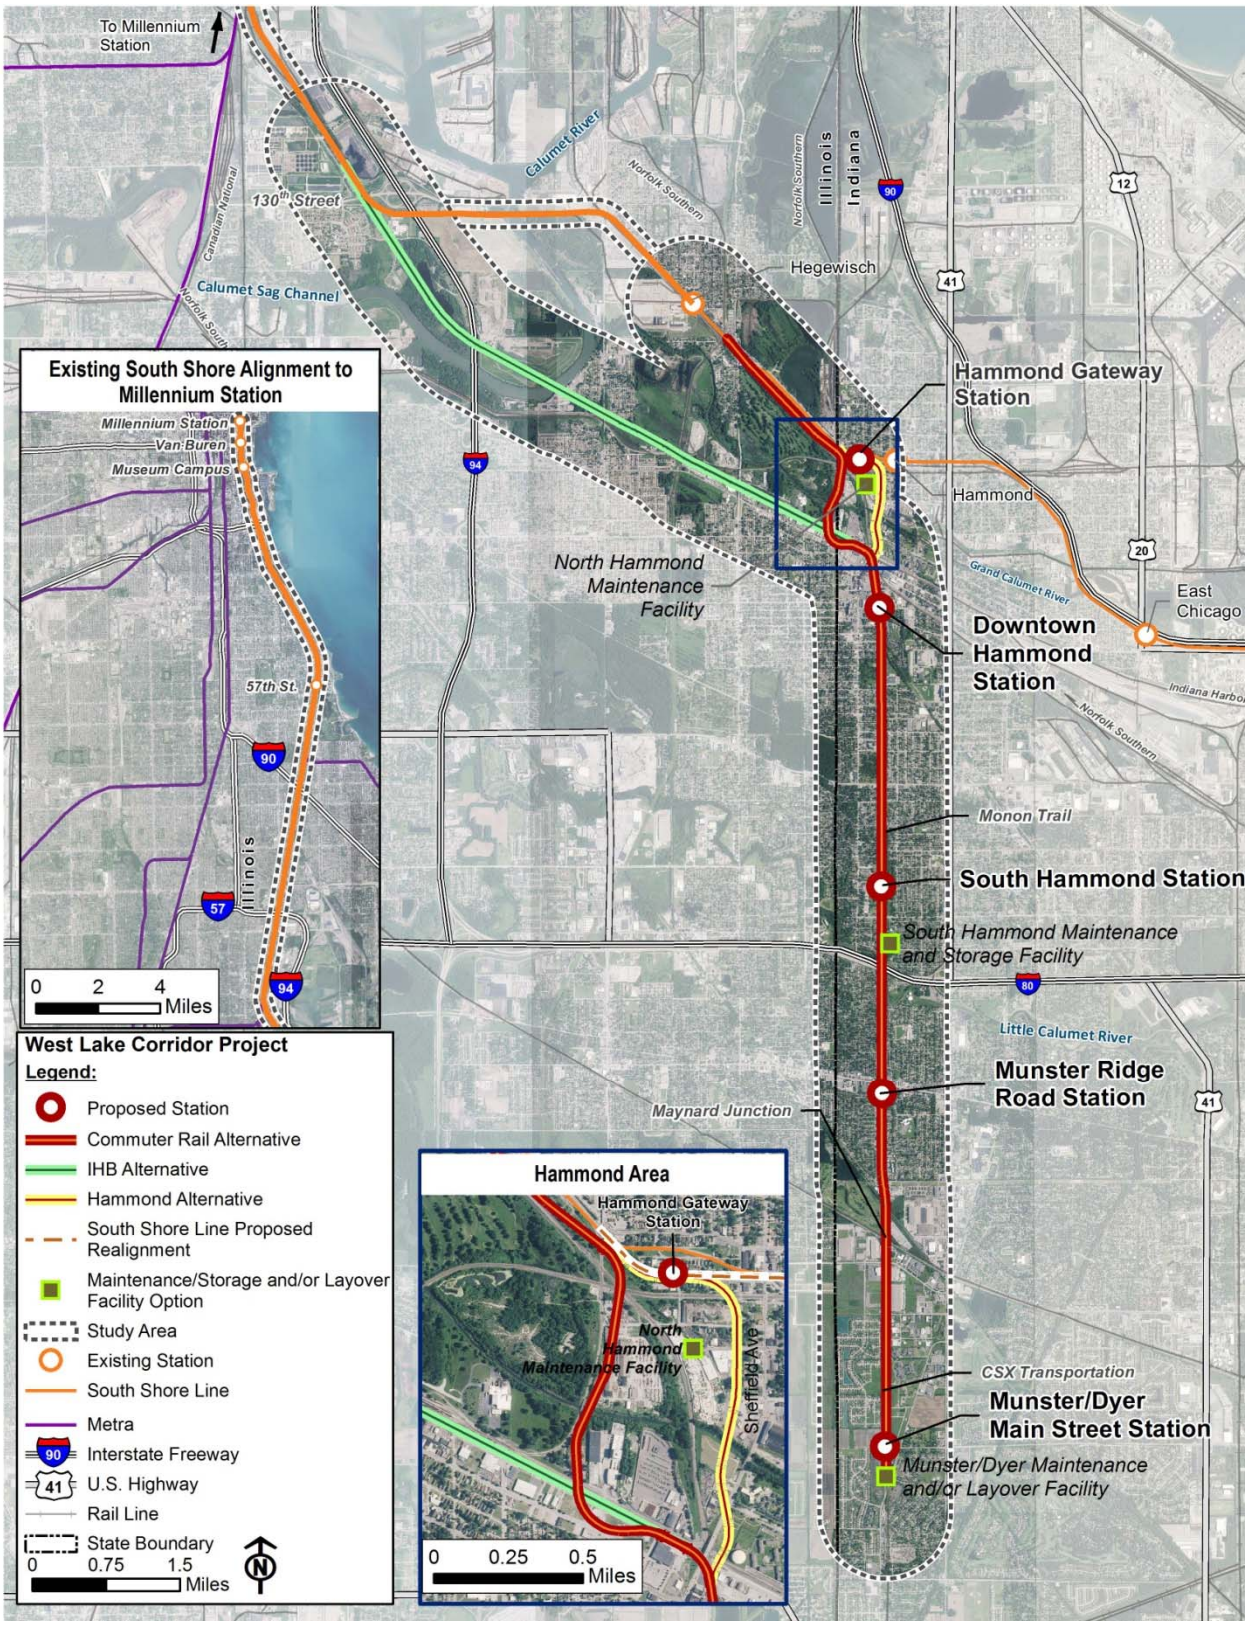

Figure 1-2 West Lake Corridor Project Study Area

1.2.2 Commuter Rail Alternative

The Commuter Rail Alternative would involve commuter rail service using electric-powered trains on an approximate 9-mile southern extension of NICTD's existing South Shore Line (SSL) between Dyer and Hammond, Indiana (see **Figures 1-2** and **1-3**). Heading north from the southern terminus near Main Street at the Munster/Dyer municipal boundary, the Project would include new track on a separate right-of-way (ROW) adjacent to, and east of, the CSX freight line in Munster. North of the proposed elevated crossing over another CSX freight line at the Maynard Junction, the proposed Commuter Rail Alternative alignment would use the publically-owned former Monon Railroad corridor in Munster and Hammond. North of downtown Hammond the track alignment would turn west under Hohman Avenue, and then continue north on new elevated track generally along the Indiana-Illinois state line to connect to the existing SSL southeast of the Hegewisch Station in Chicago. Project trains would operate on the existing MED line for their final 14 miles, terminating at Millennium Station in downtown Chicago. Station locations for the Commuter Rail Alternative would include Munster/Dyer Main Street, Munster Ridge Road, South Hammond, and Downtown Hammond.

Four design options to the Commuter Rail Alternative near the southern Project terminus include:

- **Commuter Rail Alternative Option 1**: Under this design variation, parking for the Munster/Dyer Main Street Station would be located on the east side of the station, and a vehicle maintenance and storage facility would be located south of 173rd Street in Hammond near the South Hammond Station. See **Figure 1-3**.
- **Commuter Rail Alternative Option 2**: Under this design variation, parking for the Munster/Dyer Main Street Station would be located on the west side of the existing CSX freight line. Main Street would be extended west from Sheffield Avenue using an underpass to cross the CSX railroad and Project ROW. The vehicle maintenance and storage facility would be located south of 173rd Street in Hammond near the South Hammond Station. See **Figure 1-3**.
- **Commuter Rail Alternative Option 3**: Under this design variation, the vehicle maintenance and storage facility would be located south of the Munster/Dyer Main Street Station, on the east side of the existing CSX freight line, at Munster/Dyer Main Street Station, instead of south of the South Hammond Station. Parking for the Munster/Dyer Main Street Station would be located on the east side of the station. See **Figure 1-3**.
- **Commuter Rail Alternative Option 4**: Under this design variation, the rail alignment would be routed above the existing CSX freight line at Maynard Junction, to land on the west side of the CSX freight line, and then continue south to the Munster/Dyer Main Street Station area. The Munster/Dyer Main Street Station and parking would be located west of the existing CSX freight line. A Main Street extension west under the CSX freight line and the Project ROW would be required. The vehicle maintenance and storage facility would be located south of 173rd Street in Hammond near the South Hammond Station. See **Figure 1-3**.

There are two design variations to the Commuter Rail Alternative related to the proposed alignment (i.e., the Indiana Harbor Belt [IHB] Alternative and the Hammond Alternative) as follows. See **Figures 1-4**, **1-5**, and **1-6**.

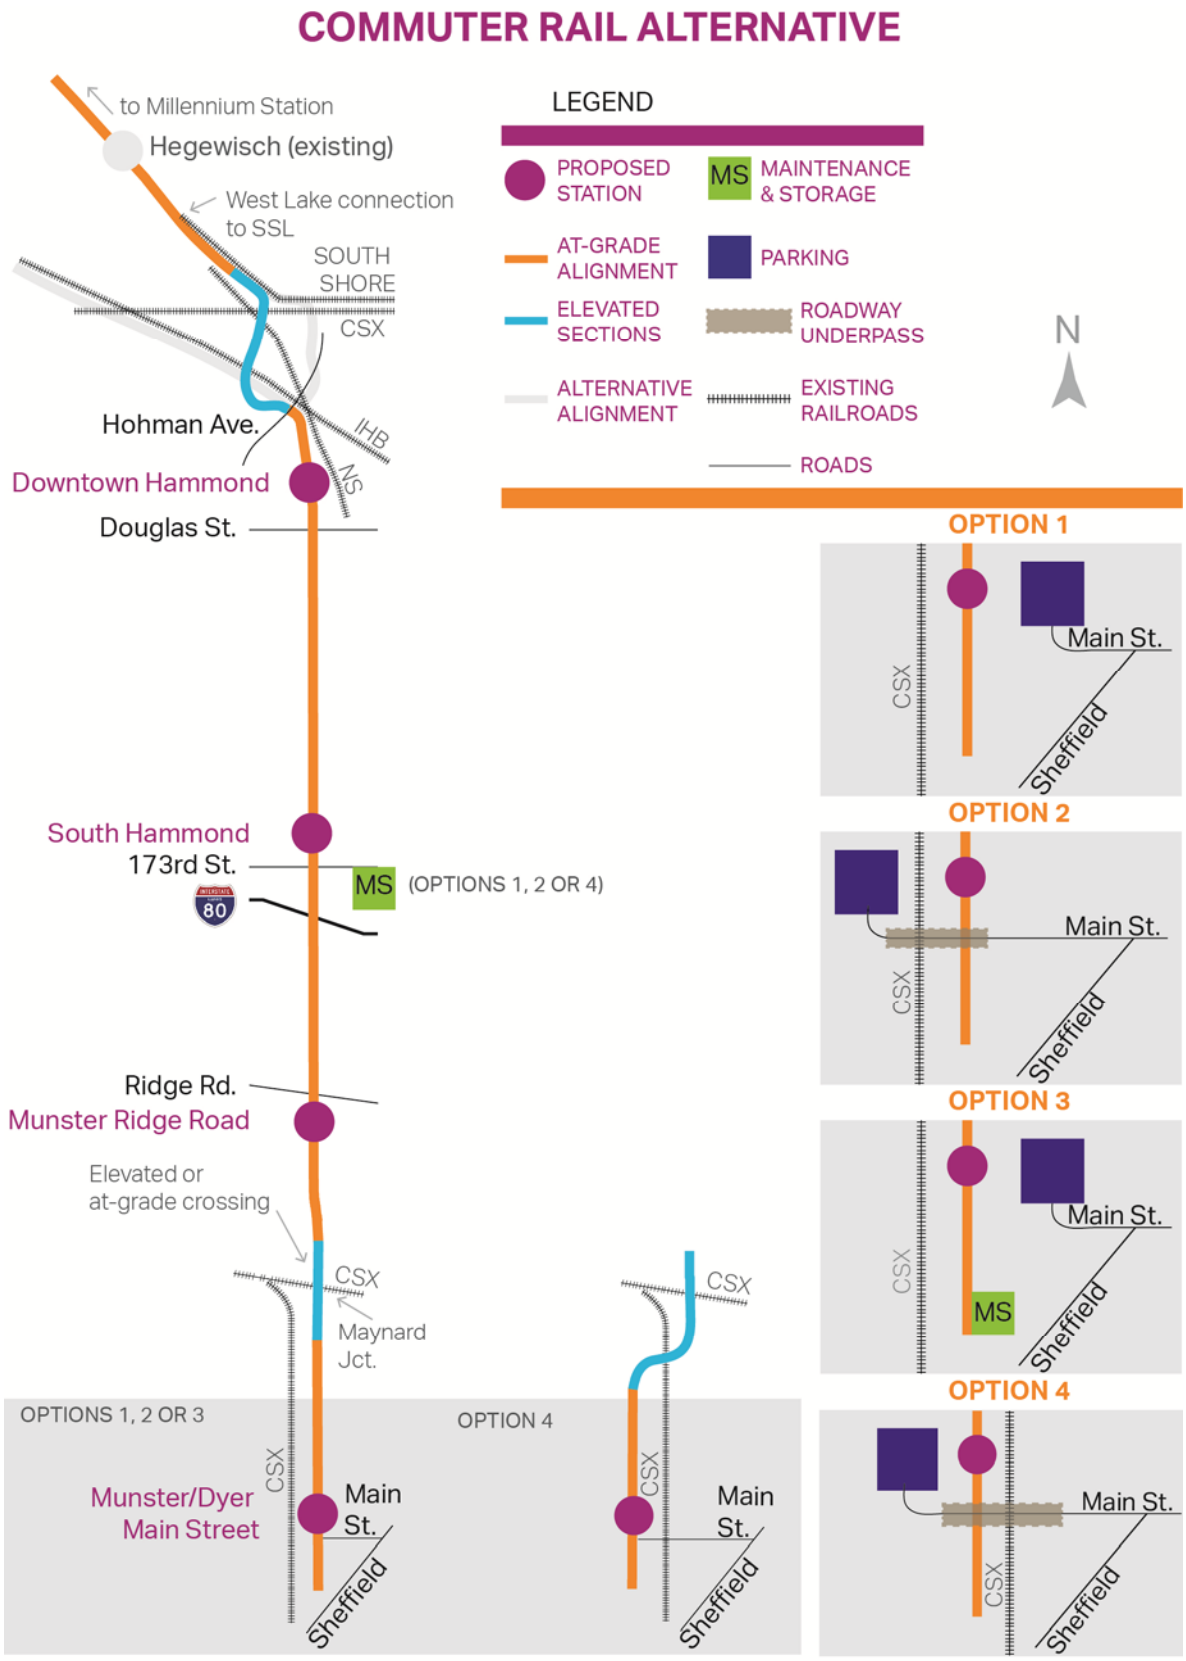

Figure 1-3 Commuter Rail Alternative Options

1.2.3 Indiana Harbor Belt (IHB) Alternative

South of Douglas Street, the IHB Alternative duplicates the Commuter Rail Alternative Options described above. From downtown Hammond north of Douglas Street, the alignment of the IHB Alternative would turn west under Hohman Avenue in Hammond and would be constructed in the IHB freight line ROW west through Calumet City, Burnham, and Chicago, Illinois. West of Burnham Avenue, the IHB Alternative would bridge over the IHB and CSX freight lines, landing in the IHB Kensington Branch freight line ROW, and would include relocating and reconstructing the IHB freight line on a new adjacent track within the existing railroad ROW. The Project would then continue northwest to the proposed connection with the existing SSL near I-94 and 130th Street in Chicago. See **Figure 1-4**.

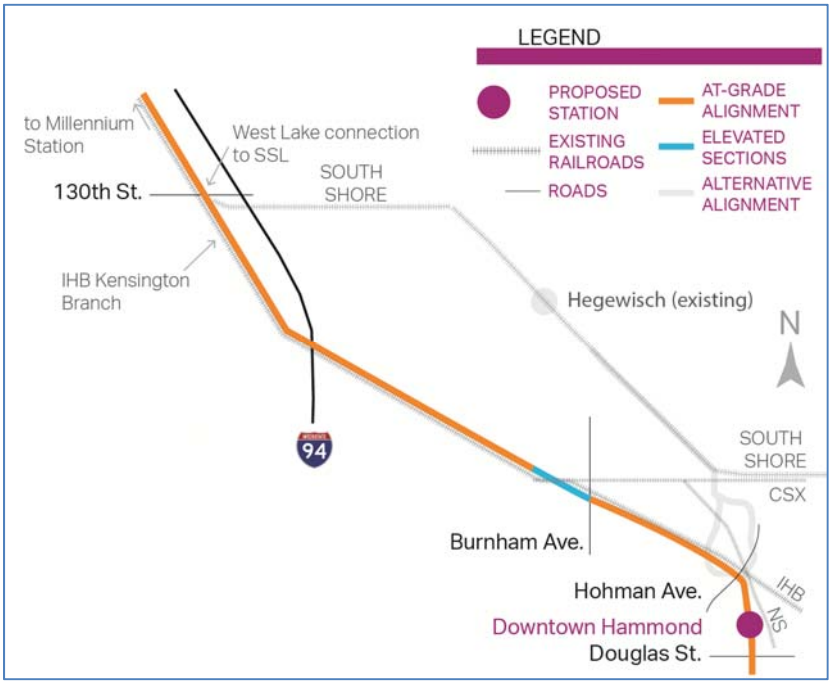

Figure 1-4 Indiana Harbor Belt Alternative

1.2.4 Hammond Alternative

South of Douglas Street, the Hammond Alternative is similar to the Commuter Rail Alternative described above. From downtown Hammond north of Douglas Street, the Hammond Alternative would extend north on embankment and bridges crossing over the IHB and Norfolk Southern freight lines immediately east of the Hohman Avenue overpass. The alignment would then extend northward and cross over Hohman Avenue just south of Michigan Street. The alignment would then continue north and west, crossing over the existing CSX freight line, and connecting with the existing SSL. See **Figure 1-5**.

Under the Hammond Alternative, the Hammond Gateway Station would be constructed in North Hammond and would replace the existing SSL Hammond Station (see **Figure 1-5**). The Hammond Alternative assumes the existing SSL track would be relocated between the existing SSL Hammond Station and the Indiana-Illinois state line to facilitate a passenger connection between the Project and the SSL at the Hammond Gateway Station on the Hammond Alternative. The alignments of both routes would be adjacent to one another at this location, allowing passengers to transfer at the combined station. During non-peak times, West Lake Corridor Project trains would operate as shuttles between Munster/Dyer Main Street Station and

Hammond Gateway Station, making connections with SSL service. **Figure 1-6** illustrates the SSL track relocation.

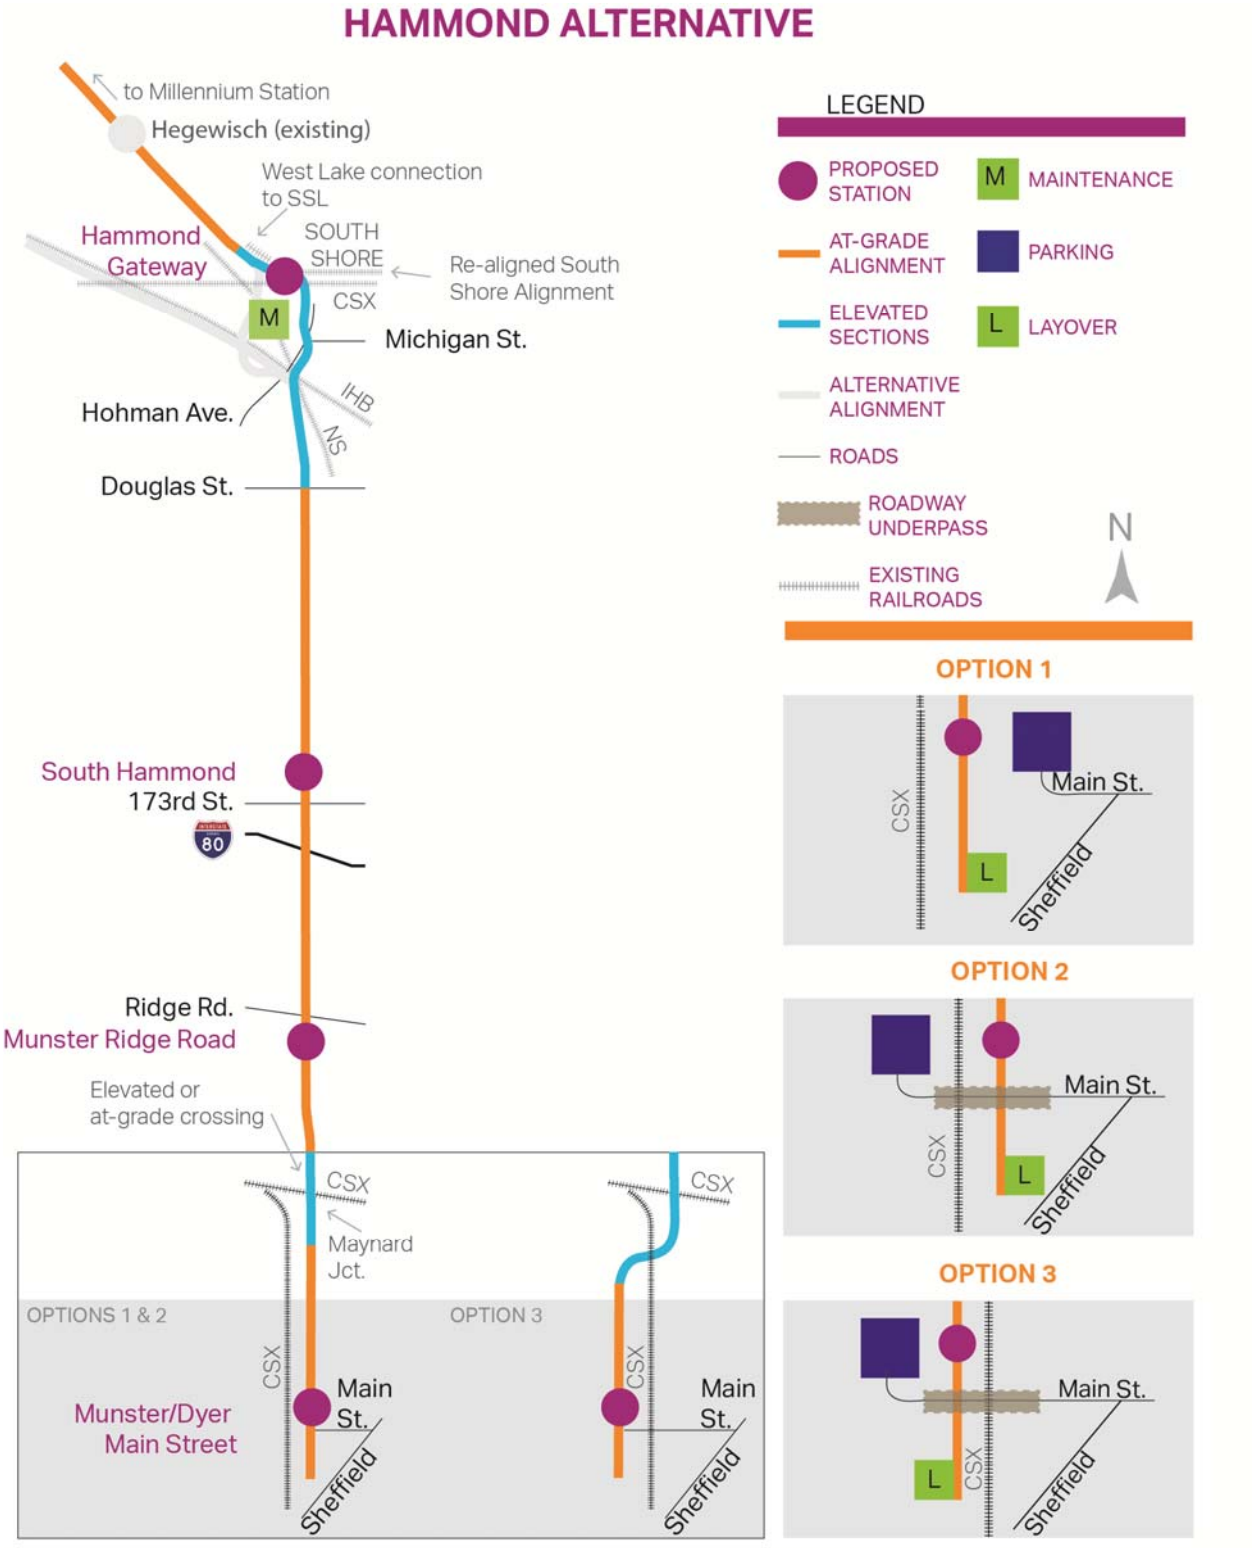

Figure 1-5 Hammond Alternative Options

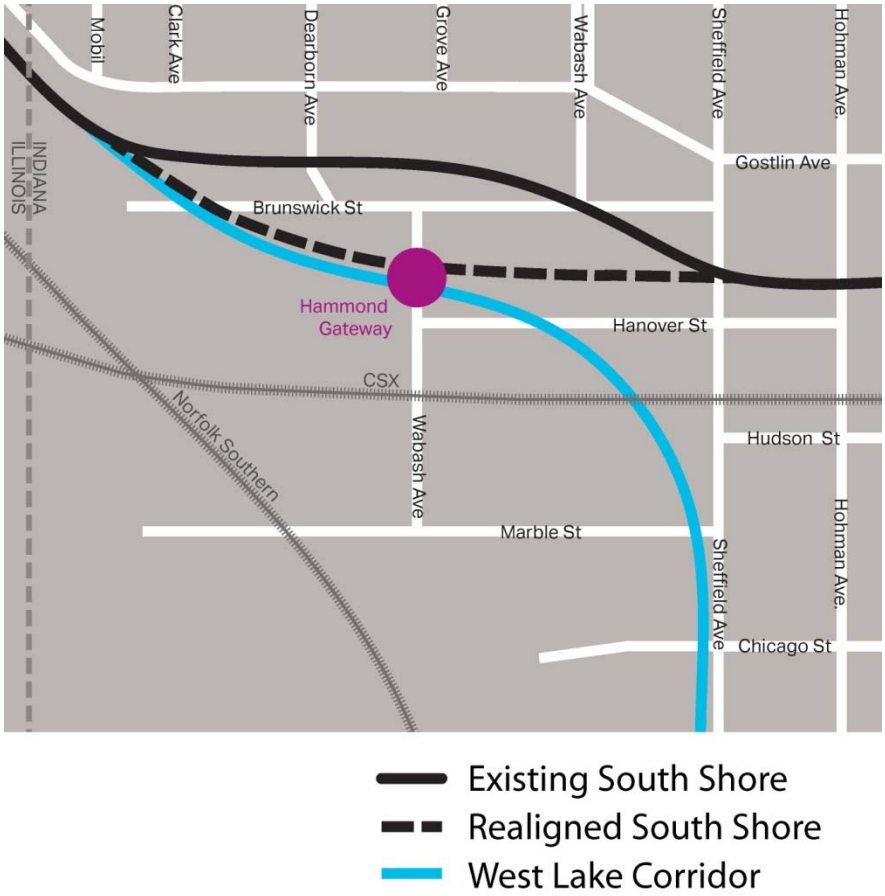

Figure 1-6 South Shore Line Proposed Realignment

A maintenance facility would be located immediately south of the Hammond Gateway Station. A separate layover facility at the southern end of the Project corridor, near the Munster/Dyer Main Street Station, would also be constructed, as shown on **Figure 1-5**. There are three design variations on how the layover facility, Munster/Dyer Main Street Station, and parking would be configured under the Hammond Alternative, as follows:

- **Hammond Alternative Option 1:** The Munster/Dyer Main Street Station, layover facility, and parking would be on the east side of the existing CSX freight line. See **Figure 1-5**.
- **Hammond Alternative Option 2:** The Munster/Dyer Main Street Station and layover facility would be on the east side of the existing CSX freight line, and the parking would be west of the CSX freight line. A Main Street extension west under the CSX freight line and Project ROW would be required. See **Figure 1-5**.
- **Hammond Alternative Option 3:** This option would require routing the Project above the existing CSX freight line at Maynard Junction, landing on the west side of the CSX freight line ROW, and continuing south to the Munster/Dyer Main Street area. The Munster/Dyer Main Street Station, layover facility, and parking would be located west of the existing CSX freight line. A Main Street extension west under the CSX freight line and the Project ROW would be required. See **Figure 1-5**.

1.2.5 Maynard Junction Rail Profile Option

One design variation is being considered for each Build Alternative—the Maynard Junction Rail Profile Option. Under this design variation, at Maynard Junction in Munster, the alignment would cross the existing CSX freight line in an at-grade profile instead of an elevated profile. The proposed alignment would remain east of the CSX freight line ROW for the Commuter Rail Alternative Options 1, 2, and 3 (see **Figure 1-3**), the IHB Alternative Options 1, 2, and 3, and Hammond Alternative Options 1 and 2 (see **Figure 1-5**).

2. REGULATORY SETTING

Numerous federal and state laws and regulations govern the handling, treatment, storage, and transportation of hazardous and contaminated materials. Key regulations directing the investigation pertinent to hazardous, contaminated, and regulated materials relevant to the proposed Project include:

- **Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (42 United States Code [USC] § 9601 et seq.)**: Provides a federal "superfund" to clean up uncontrolled, inactive, or abandoned hazardous waste sites and accidents, spills, and emergency releases of pollutants and contaminants into the environment.
- **Superfund Amendments and Reauthorization Act (SARA) (Public Law 99-499)**: Amended CERCLA in 1986 to provide a program to address abandoned hazardous waste sites.
- **Resource Conservation and Recovery Act of 1976 (RCRA) (42 USC § 6901 et seq.)**: Regulates the safe generation, treatment, storage, transportation, and disposal of solid hazardous wastes from "cradle-to-grave." Subtitle I of RCRA establishes a regulatory program that prevents, detects, and cleans up releases from underground storage tank (UST) systems containing petroleum or hazardous substances.
- **Federal Occupational Safety and Health Act (OSHA) (29 USC § 651 et seq.)**: Provides workers with a place of employment free from recognized hazards to safety and health.
- **Toxic Substances Control Act (TSCA) (15 USC § 2601 et seq.)**: Includes restrictions relating to chemical substances and mixtures and requirements for reporting, recordkeeping, and testing.
- **Indiana Title 329 Solid Waste Management Division (329 Indiana Administrative Code 3.1-1-2)**: Provides Indiana's hazardous waste and solid waste management programs and contains requirements for addressing inactive hazardous substance or waste disposal sites.
- **Illinois Solid Waste Management Act (415 Illinois Compiled Statutes 20)**: Provides Illinois's hazardous waste and solid waste management programs and contains requirements for addressing inactive hazardous substance or waste disposal sites.

3. METHODOLOGY

3.1 Scope of Work

This limited-scope Phase I ESA was performed in general conformance with applicable portions of ASTM E 1527-13 for ESAs. Exceptions to, or deletions from, this practice are described in this report. The purpose of this limited-scope Phase I ESA is to provide NICTD with information for use in evaluating recognized environmental conditions (RECs) associated with the proposed Project.

Per the ASTM standard, potential findings can include RECs, including historical RECs (HRECs), controlled RECs (CRECs), and *de minimis* conditions. A REC is defined by the ASTM standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

A HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

A CREC is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. *De minimis* conditions are those situations that do not present a material risk of harm to public health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

By definition, each REC and CREC identified has the potential to impact the Study Area. For the purpose of this analysis, AECOM has classified each REC and CREC as either a Low, Medium, or High Risk site within the findings of this report (**Section 4.6**). These risk classifications are defined as follows:

- **Low Risk**: Properties identified as CRECs.
- **Medium Risk**: Properties identified as RECs that have closed leaking underground storage tank (LUST) or other spill incidents, aboveground storage tank (AST)/UST sites with no spill-related listings, vehicle repair sites, junk yards, or sites without long-term historical industrial use.
- **High Risk**: Properties identified as RECs that have active/open LUST or other spill incidents, historical dry cleaners, historical auto stations (i.e., gas stations), active LUST sites, or sites with identified long-term historical industrial use.

This assessment is based on a review of existing conditions, reported pre-existing conditions, and observed operations in the Study Area and adjacent properties. The limited-scope Phase I ESA included a site visit, regulatory research, historical review, and environmental database analysis of the proposed Project. In conducting the limited-scope Phase I ESA, the Study Area was assessed for visible signs of possible contamination, historical records were reviewed to

identify historical uses that could be indicative of hazardous materials use or release, and environmental database records were analyzed for the Study Area and surrounding sites. This project was performed in general accordance with applicable portions of the ASTM E 1527-13 and AECOM's Scope of Services, dated April 23, 2014.

The following deviations from the ASTM E 1527-13 have occurred as part of this report:

- Interviews with owners and operators in the Study Area were not performed.
- An ASTM E 1527-13 User Questionnaire was not completed by the user.
- A search of title records and environmental liens was not performed.
- Data gaps/data failure were not evaluated as part of this Project.
- Local agency interviews and agency file reviews were limited to AECOM's review of publicly accessible online databases maintained by the United States Environmental Protection Agency (USEPA), Indiana Department of Environmental Management (IDEM), and Illinois Environmental Protection Agency (IEPA).

3.2 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- It was not feasible to evaluate every portion of the proposed Project during the site visit. Some portions of the proposed Project were inaccessible due to access restrictions or safety concerns. AECOM's evaluation of the proposed Project focused on areas that were accessible and areas where hazardous substances were expected to be handled based on the known or suspected current and historic uses of the portions of the proposed Project and adjoining sites. This particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- AECOM's site visit focused on those portions of the Project where proposed construction or land disturbance activities associated with one or more of the Build Alternative Options may have the potential to impact hazardous materials use, storage, or disposal. The site visit excluded the portion of the Project extending north of Kensington Avenue to Millennium Station, as there is no new construction proposed for that portion of the Study Area.
- It was winter at the time of the assessment and snow cover was observed throughout portions of the proposed Project; therefore, not all exterior surfaces were able to be observed. Based on the observed uses of the proposed Project, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.

4. AFFECTED ENVIRONMENT

The following sections describe the affected environment throughout the Study Area, as documented during AECOM's limited-scope Phase I ESA of the proposed Project.

4.1 Proposed Project Location and Description

The Study Area included the proposed alignments, station areas, layover facilities, and maintenance and storage facilities. See **Section 1.1** for a detailed description of the Project Alternatives. Additionally, this report discusses the existing settings associated with the portion of the Study Area where the proposed commuter rail service would connect to the existing MED/SSL, on which other rail services operate. It includes 13 miles of the existing MED/SSL and terminates at Millennium Station in downtown Chicago.

4.2 Environmental Setting

AECOM researched the environmental setting for the proposed Project to determine the general characteristics of the Study Area. Topography, soil, geology, groundwater, and hydrology were reviewed, as summarized in the following sections. The environmental setting of an area can affect the transport and storage of hazardous materials and contaminants within the environment.

4.2.1 Topography

AECOM reviewed the United States Geological Survey (USGS) topographic maps of the Study Area (Calumet City, Lake Calumet, and Dyer quadrangles) and information provided on the Google Earth website to evaluate the topography of the Study Area. The overall topography in the Study Area generally slopes to the north-northeast, toward Lake Michigan. Along the proposed alignment, the topography slopes steadily downward from south to north, with the highest elevations located on the south end of the Project (south of Ridge Road), and the lowest elevations on the north end of the proposed Project.

Along the proposed alignment, the elevation ranges from approximately 620 feet above mean sea level (msl) at the southernmost point to approximately 585 feet above msl at the northernmost point. The elevation at the proposed Munster/Dyer Main Street Station is approximately 620 feet above msl, and the elevation decreases steadily toward the north along the proposed alignment. At the proposed Munster Ridge Road Station location, the elevation is approximately 615 to 620 feet above msl. At the proposed South Hammond Station location, the elevation is approximately 600 feet above msl. At the proposed Downtown Hammond Station location, the elevation is approximately 592 feet above msl.

The elevation along the proposed alignment for the IHB Alternative Options is relatively flat, ranging from 585 to 620 feet above msl. The elevation along the proposed alignment north of Hohman Avenue for the Hammond Alternative Options is relatively flat, ranging from 580 to 590 feet above msl, with the lower elevations occurring where the alignment crosses the Grand Calumet River.

Along the area north of Kensington Avenue on the existing MED/SSL, the elevation is relatively flat at approximately 600 feet above msl from Kensington Avenue on the south to East 47th

Street on the north. From north of East 47th Street to Millennium Station, the elevation ranges from approximately 585 feet above msl to 600 feet above msl.

4.2.2 Soil/Geology

AECOM reviewed soils information for the Study Area using the United States Department of Agriculture (USDA) Web Soil Survey tool. According to the soils information provided by the Web Soil Survey tool, soils in the vicinity of the Study Area include approximately 29 different types of soil units. The Natural Resource Conservation Service Web Soil Survey indicates that there are 31 soil units in Lake County, Indiana, and 30 soil units in Cook County, Illinois (USDA 2015).

For the portions of the Study Area in Indiana, there are seven soil units present: Bono silty clay; Maumee loamy fine sand; Milford silt loam, overwash; Plainfield fine sand, 0 percent to 6 percent slopes; Rensselaer loam, calcareous subsoil variant; Urban land; and Watseka loamy fine sand. The most-prevalent soil types in the Indiana portion of the Project are Urban Land (10.5 percent of the Indiana portion of the Project, comprising primarily the north portion of the Study Area) and Bono silty clay (8.6 percent of the Indiana portion of the Project, comprising the southern portion of the Study Area).

For the portions of the Study Area in Illinois, there are 22 soil units present. The 22 soil units present include Aquents, clayey, undrained, nearly level; Gilford fine sandy loam, 0 percent to 2 percent slopes; Landfills; Muskego and Houghton mucks, 0 percent to 2 percent slopes; Oakville fine sand, 1 percent to 6 percent slopes; various types of Orthents soils; Pella silty clay loam, 0 percent to 2 percent slopes; Plainfield loamy sand, 1 percent to 6 percent slopes; Sawmill silty clay loam, 0 percent to 2 percent slopes, frequently flooded; various types of Urban land; and Watseka loamy fine sand, 0 percent to 2 percent slopes. The most-prevalent soil types in the Illinois portion of the Project include various types of Orthents soil (18 percent) and Urban Land (19 percent).

Soils in the vicinity of the existing MED/SSL include approximately 15 different types of soil units. The most prevalent soil types in the expanded Study Area were reported to include “Urban Land”; Urban land-Orthents, loamy, complex, nearly level; Urban land-Psamments complex, nearly level; and Urban land-Orthents, clayey, complex, nearly level. Together, these four types of soil comprise approximately 91 percent of the expanded Study Area. The remaining approximately 9 percent of soil types comprising the expanded Study Area include the types Psamments, Orthents, Watseka, Oakville, and Alfic Udarents.

According to geologic information gathered through review of the Indiana University Bloomington Lake Michigan Rim GIS online mapping tool, the bedrock geology in the Study Area is primarily of the Niagaran and Cayugan Series, Silurian System, Wabash formations that include limestone, dolomite, and argillaceous dolomite rock types.

4.2.3 Groundwater/Hydrology

AECOM reviewed the “Potentiometric Surface Map of the Bedrock Aquifers of Lake County, Indiana” to evaluate groundwater hydrology in the Study Area (Indiana Department of Natural Resources [INDNR] 2012). Based on this information, groundwater within bedrock aquifers in the Study Area appears to be present at elevations ranging from approximately 620 feet above msl at the southernmost extent of the proposed Project (in the vicinity of the Munster/Dyer Main Street Station), to approximately 590 to 580 feet above msl at the northernmost extent of the Study Area. Bedrock aquifer elevation steadily decreases from south to north along the Study

Area. Based on the surface topography of the Study Area, as discussed in **Section 4.2.1**, the depth to groundwater in the Study Area is expected to range from approximately 5 feet below ground surface (bgs) to 60 feet bgs, and groundwater is expected to flow to the north-northeast. However, the actual groundwater flow direction and depth in the vicinity of the proposed Project cannot be determined without site-specific groundwater monitoring well data.

4.3 Site Visit

AECOM performed a site visit to the Study Area on January 15, 2015. Site-related limiting conditions encountered during this assessment are summarized in **Section 3.2**. The site visit methodology consisted of walking over accessible areas of the Study Area and the surrounding area in order to obtain information regarding the likelihood of RECs. Specifically, the investigators were looking for visual evidence of improper chemical storage or use, improper waste disposal, dump sites, or other evidence of hazardous materials, hazardous waste, or other environmental contamination. Indications of past property uses, to the extent feasible, were identified within the Study Area. Current property uses were also identified. The following features were evaluated across the Study Area, to the extent feasible:

- Presence/use of petroleum products and hazardous materials
- Presence/use of polychlorinated biphenyls
- Presence/use of ASTs
- Presence/use of USTs
- Evidence of solid waste generation, management, and disposal practices
- Evidence of hazardous waste generation, management, and disposal practices
- Evidence of wastewater discharges, including industrial process discharges
- Evidence of stormwater management concerns

Table 4-1 summarizes AECOM's observations of potential uses of concern on or surrounding the Study Area, as observed during the site visit.

4.4 Site and Area History

Historical information for the proposed Project and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1938, 1939, 1952, 1954, 1958, 1961, 1965, 1973, 1974, 1977, 1988, 1998, 2002, 2003, 2005, and 2007, reviewed at www.historicalaerials.com and http://igs.indiana.edu/IHAPI/map/
- Topographic maps dated 1929, 1955, 1962, 1970, 1974, 1981, 1990, 1992, 1997, 1998, and 2000
- Sanborn® Fire Insurance Maps for Hammond, Indiana, dated 1886, 1887, 1898, 1915, 1930, and 1951

AECOM's review of these historical sources is presented in **Section 4.4.1**. A summary of RECs identified in association with the history of the proposed Project and the surrounding area is provided in **Section 4.4.2**.

Table 4-1 Site Visit Observations

Facility Name	Facility Address	Site Visit Observations
Commuter Rail Alternative Options		
Gerber Collisions	490 45th Avenue	Identified as a REC based on use as an auto repair facility.
Citgo Gas Station	323 Ridge Road	Identified as a REC based on use as a gas station.
Sunny Cleaners	428 173rd Street	Identified as a REC based on use as a dry cleaners.
MRL Enterprises Inc. (scrap yard)	421 Locust Street	This facility appeared to be a scrap yard based on the presence of machinery and scrap materials throughout the exterior portion of the site lot. A banner on the side of the building stated that this facility has been in service for at least 30 years (1977-2007). Based on the industrial nature of this facility and the fact that the facility has been in operation since at least 1977, this site is considered a REC.

4.4.1 History

Commuter Rail Alternative Options

The southern portion of the proposed Commuter Rail Alternative alignment (between Sheffield Avenue on the south and 45th Street on the north) was generally improved as cultivated agricultural (row crop) land by 1938, and a rail corridor was present along this portion of the proposed Commuter Rail Alternative alignment by that time. A few scattered farm residences were also present throughout this area. This area appeared relatively unchanged through 1955. By 1962, two United States (US) military reserve facilities were constructed on the east side of the Study Area, one along Sheffield Avenue and one to the south of the present-day location of 45th Street. By 1970, some parcels in this area were converted from agricultural land to industrial use. By 1981, 45th Street had been constructed. By 1992, the two US military reserve facilities were no longer present. Development within this area quickened after the 1980s, and by 1998 the blocks to the south of 45th Street had been improved with various commercial and

industrial properties, while residential developments were constructed on the south end, along Sheffield Avenue. Additional residential developments were constructed in this area during the 2000s.

The middle portion of the proposed Commuter Rail Alternative alignment (between 45th Street on the south and Interstate 80 on the north) was generally improved as cultivated agricultural (row crop) land by 1938, and a rail corridor was also present along this portion of the Commuter Rail Alternative alignment by that time. Small buildings (residential and/or commercial) were present along and to the north of Ridge Road. Interstate 80 was constructed along the north portion of this area by 1952. The majority of this area, both north and south of Ridge Road, is now improved with residences. The majority of the residences in this area were constructed from the late 1950s through the 1960s.

The northern portion of the proposed Commuter Rail Alternative alignment (north of Interstate 80) is located in Hammond, Indiana. This portion of the Commuter Rail Alternative alignment was heavily developed by 1938. The southern portion of Hammond has historically been improved with residential properties since at least 1938, while the northern portion of Hammond was historically improved with a mix of residential properties and significant industrial development. The Monon Rail Yard was present on the east side of the proposed Project to the north of present-day Interstate 80, in the proposed location of the South Hammond Maintenance and Storage Facility, from the late 1800s until the mid-1980s. On the west side of the proposed Project, opposite the Monon Rail Yard, the area was improved as cultivated agricultural (row crop) land toward the south and with residential developments toward the north by 1938. By 1961, the majority of the area to the west of the Monon Rail Yard had been improved with a mix of residential, commercial, or industrial properties. The area to the north of Plummer Avenue/Industrial Road was known as the Calumet Industrial District. This area has been improved with industrial facilities starting as early as 1886 through the present. Historical uses associated with some of the surrounding sites located in the vicinity of the Commuter Rail Alternative alignment have been identified as RECs. These RECs are discussed in **Section 4.4.2**.

IHB Alternative Options

For a discussion of the history of the portion of the IHB Alternative Options located south of Douglas Street, refer to the Commuter Rail Alternative Options above. The following paragraph discusses the history of the portion of the IHB Alternative Options located north of Douglas Street.

As discussed in the historical summary for the Commuter Rail Alternative Options above, the northern portion of Hammond, Indiana, has historically been improved with a mix of residential properties and significant industrial development. The IHB Alternative Options are generally located within an area that has been developed since prior to 1939. North of the Little Calumet River, the surrounding land appears to have been forest preserve land and wetlands until at least 1966. By 1974, small industrial buildings had been constructed in the vicinity of the Calumet Expressway (Interstate 94) and portions of the surrounding area formerly featuring wetlands now featured “tailings ponds” and other surface disturbances. By 1992, the “tailings ponds” and other ground disturbance areas had been replaced with topographic features consistent with the present-day landfill features located in this area. Historical uses associated with some of the surrounding sites located in the vicinity of the IHB Alternative Options have been identified as RECs. These RECs are discussed in **Section 4.4.2**.

Hammond Alternative Options

For a discussion of the history of the portion of the Hammond Alternative Options located south of Douglas Street, refer to the Commuter Rail Alternative Options above. The following paragraph discusses the history of the portion of the Hammond Alternative Options located north of Douglas Street.

As discussed above, the northern portion of Hammond, Indiana, has historically been improved with a mix of residential properties and significant industrial development. The portion of the Study Area where the Hammond Alternative Options are located has been improved with roadways, railroad tracks, and a mix of residential and industrial/commercial developments since 1939 through the present, according to AECOM's review of historical documentation. Historical uses associated with some of the surrounding sites located in the vicinity of the Hammond Alternative Options have been identified as RECs. These RECs are discussed in **Section 4.4.2**.

4.4.2 Historical Uses of Concern

Tables 4-2 through **4-4** list the sites that were identified as RECs in association with their historical uses, based on AECOM's research, for the Commuter Rail Alternative Options, IHB Alternative Options, and Hammond Alternative Options. This list was prepared in consideration both of the historical analysis discussed in **Section 4.4.1** and after review of the environmental database listings for the surrounding area, where appropriate. AECOM's review of the environmental database report for the proposed Project is presented in **Section 4.5**.

In the tables that follow, **Table 4-2** lists historical uses of concern associated with the Commuter Rail Alternative Options, **Table 4-3** lists historical uses of concern associated with the portion of the IHB Alternative Options located north of Douglas Street, and **Table 4-4** lists historical uses of concern associated with the portion of the Hammond Alternative Options located north of Douglas Street. The historical uses of concern associated with the portions of either the IHB or Hammond Alternative Options located south of Douglas Street are the same as those identified for the Commuter Rail Alternative Options south of Douglas Street; refer to **Table 4-2** for a discussion of those RECs (note that sites common to all three Alternatives, which are south of Douglas, are listed above the break in Table 4-2).

NIPSCO Corp MGP	Wilcox and Hohman	This site was improved as a manufactured gas plant constructed in 1900. Manufactured gas was produced using coal carbonization and water gas processes from 1904 through approximately 1930. Records indicate that the Site was then used as a gas transfer station from an East Chicago, Indiana facility until approximately 1950. Several aboveground and underground storage tanks were installed for use on the site. By 1951 the facility was shut down, the site buildings were abandoned, and the property converted to a supply yard and storage area for NIPSCO. Based on the historical use of this site as a manufactured gas plant, this site is considered a REC.

4.5 Database and Records Review

4.5.1 Database Information

In accordance with the scope of work and ASTM E 1527-13, a search of various governmental databases was conducted by Environmental Data Resources Inc. (EDR). The site-specific environmental database report was reviewed to evaluate whether hazardous materials present in soil and/or groundwater from on-site and/or off-site sources of concern have the potential to impact the proposed Project.

The report details database information for each of the sites identified/geocoded within the specified radius. Additional sites with recognized environmental risks were identified, but EDR was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in the database report as "orphan" sites. Based upon AECOM's review, there do not appear to be any significant concerns associated with any of the orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in **Appendix A**.

Based on AECOM's research, the proposed Project is not located on or within a 1-mile radius of tribal lands.

Proposed Project and Surrounding Sites

The environmental database report was prepared using a search radius of 1 mile from the proposed alignment. Within the search area, numerous sites were identified within 1 mile of the proposed Project, as documented in the EDR Report (**Appendix A**). Based on AECOM's review of these database listings, the majority of these sites are not expected to present a REC, or a hazardous materials threat, to the proposed Project based on their distance from the proposed Project, regulatory status (i.e., closed, no violations found), media impacted (i.e., soil only), and/or topographical position from the proposed Project (i.e., down-gradient or cross-gradient).

Based on AECOM's review, the sites listed in the following tables were identified as RECs for the Study Area. Refer to the full site listing in the EDR report (**Appendix A**) for complete address information, including city, for each site identified in the tables that follow. By definition, each REC site has the potential to impact the Study Area.

In the tables that follow, **Table 4-5** lists database-identified RECs associated with the Commuter Rail Alternative Options, **Table 4-6** lists database-identified RECs associated with the portion of the IHB Alternative Options located north of Douglas Street, and **Table 4-7** lists database-identified RECs associated with the portion of the Hammond Alternative Options located north of Douglas Street. The database-identified RECs associated with the portions of either the IHB or Hammond Alternatives Options located south of Douglas Street are the same as those identified for the Commuter Rail Alternative Options south of Douglas Street; refer to **Table 4-5** for a discussion of those concerns (i.e., sites listed above table break). Note that AECOM's analysis of database information excluded the portion of the Project extending north of Kensington Avenue to Millennium Station, as there is no new construction proposed for that portion of the Study Area, and therefore, there are no impacts expected to result from that portion of the Study Area.

Commuter Rail Alternative Options

Table 4-5 lists the RECs identified in association with the Commuter Rail Alternative Options.

Table 4-5 Database Analysis – Commuter Rail Alternative Options

EDR Site No.	Facility Name	Facility Address	Database Listings and Analysis
131	American Brick	Calumet & 45th Street	This facility is listed in the CERC-NFRAP database. The database listing indicates that this site was identified as a contaminated site and entered into the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) program in 1980. Subsequent evaluation of the property resulted in the site being removed from CERCLIS due to it not being a federal facility; the site was moved to the CERC-NFRAP list at that time. No additional database listings were present to indicate whether the contamination at this site had been remediated under a different (i.e., state-level) environmental program; thus, the potential exists for contamination to remain present at this site. Therefore, this site is considered a REC.
130	Chemlawn Corp	519 45th Street	This facility is listed in the RCRA Non Gen/NLR, UST, and IN Manifest databases. The UST database listing indicates that one 6,000-gallon gasoline UST is registered as "Permanently Out of Service" at this site. 122	Speedway Station #7680	444 Ridge Road	This facility is listed in the SPILL database in association with four spill events; on the UST database in association with six "Permanently Out of Service" and five "Currently in Use" USTs; on the LUST database in association with one incident that has received "No Further Action (NFA) – Conditional Closure" status; and on the AUL database in association with an environmental restrictive covenant from a LUST incident. The AUL listing indicates that activity and use limitations are in place over the entire property, including construction restrictions, groundwater use restrictions, residential use restrictions, and paved or concrete cap engineering barrier restrictions. Based on the conditional nature of the LUST NFA status and the presence of five in-service USTs, this site represents a REC.

EDR Site No.	Facility Name	Facility Address	Database Listings and Analysis
121	Phillips Petroleum Manor Ridge 66	323 Ridge Road	This site is listed in the UST database in association with three "Currently in Use" gasoline USTs and one "Permanently Out of Service" used oil UST; on the SPILL database; and on the LUST. The LUST database listing indicates that one LUST incident has affected the soil and groundwater at this site, and the status of the LUST incident is described as monitored natural attenuation. Based on the active status of this LUST and the presence of known contamination in the soil and groundwater at this site, this facility represents a REC.
116	Sunny Cleaners	428 173rd Street	This site is listed in the RCRA-SQG and EDR Historical Cleaners databases. The RCRA-SQG database listing identified two violations that were received by this site, both of which are listed as having achieved compliance. 4.5.2 Vapor Encroachment Screening

AECOM conducted a Tier 1 vapor encroachment screening (VES) as part of this assessment. This screening was conducted in general accordance with the ASTM E 2600 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions dated June 2010. The objective of the VES was to evaluate the following:

- A vapor encroachment condition (VEC) exists, or
- Is likely to exist, or
- Cannot be ruled out, or
- Can be ruled out because it does not exist or is not likely to exist.

Based on AECOM's review of the environmental database listings for the proposed Project and surrounding sites, as presented in the previous section, AECOM identified numerous properties located within the vicinity of the Study Area that are or have in the past been impacted by petroleum hydrocarbons, volatile organic compounds, and/or semivolatile organic compounds. Therefore, a VEC cannot be ruled out.

4.5.3 Agency File Review

AECOM reviewed the USEPA Enforcement and Compliance History Online (ECHO) and Envirofacts databases, as well as state environmental databases held by IEPA and IDEM, to identify database listings related to hazardous materials sites located within or surrounding the Study Area. Information gathered in review of these online databases has been incorporated throughout this report where appropriate.

4.6 Findings

AECOM performed a limited-scope Phase I ESA of the proposed Project in conformance with the scope and limitations of ASTM E 1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute all appropriate inquiry for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in **Section 3.1** and **3.2**.

AECOM's assessment identified a total of 68 RECs, 2 CRECs, and 3 HRECs for the Study Area.

By definition, each REC and CREC identified has the potential to impact the Study Area. For the purpose of this analysis, AECOM has classified each REC and CREC as either a Low, Medium, or High Risk site. These risk classifications are defined as follows:

- **Low Risk**: Properties identified as CRECs.
- **Medium Risk**: Properties identified as RECs that have closed LUST or other spill incidents, AST/UST sites with no spill-related listings, vehicle repair sites, junk yards, or sites without long-term historical industrial use.
- **High Risk**: Properties identified as RECs that have active/open LUST or other spill incidents, historical dry cleaners, historical auto stations (i.e., gas stations), active LUST sites, or sites with identified long-term historical industrial use.

The following sections summarize the findings and opinions of this Phase I ESA for the proposed Project.

4.6.1 Recognized Environmental Conditions

5. ENVIRONMENTAL CONSEQUENCES

Since hazardous materials and/or petroleum products are not resources, in lieu of discussing the environmental consequences of the Project to hazardous materials and/or petroleum products, environmental consequences are discussed on the basis of the impact of the presence of hazardous materials and/or petroleum products to the Project. The potential to encounter hazardous materials and/or petroleum products is likely depending on construction activities.

5.1 Operating Phase Impacts

5.1.1 No Build Alternative

The No Build Alternative would not encounter any hazardous materials and/or petroleum products, as the Project would not be constructed. Potential impacts associated with other projects under the No Build Alternative would be evaluated separately as part of the planning for those projects.

5.1.2 Commuter Rail Alternative Options

Commuter Rail Alternative Option 1

The proposed South Hammond Maintenance and Storage Facility would be used to store and maintain commuter rail vehicles. This facility would generate regulated materials associated with maintenance activities. These materials would include oils, greases, solvents, and other waste materials. NICTD would operate the Project under a health and safety program that includes provisions for the safe handling, storing, and disposing of regulated materials. In doing so, operational impacts regarding regulated materials are unlikely to occur.

Commuter Rail Alternative Option 2

Commuter Rail Alternative Option 2 would have the same impacts as described for Commuter Rail Alternative Option 1.

Commuter Rail Alternative Option 3

The proposed Munster/Dyer Maintenance and Storage Facility would be used to maintain and store commuter rail vehicles. The findings for Commuter Rail Alternative 1 apply to the proposed Munster/Dyer Maintenance and Storage Facility.

Commuter Rail Alternative Option 4

Commuter Rail Alternative Option 4 would have the same impacts as described for Commuter Rail Alternative Option 1.

5.1.3 IHB Alternative Options

The impacts described for the Commuter Rail Alternative Options would occur under the IHB Alternative Options.

5.1.4 Hammond Alternative Options

Hammond Alternative Option 1

The proposed North Hammond Maintenance Facility would be used to maintain commuter rail vehicles. This facility would generate regulated materials associated with maintenance activities. These materials would include oils, greases, solvents, and other waste materials. Similar activities would occur at the proposed Munster/Dyer Layover Facility. NICTD would operate the Project under a health and safety program that includes provisions for the safe handling, storing, and disposing of regulated materials. In doing so, operational impacts regarding regulated materials are unlikely to occur.

Hammond Alternative Option 2

Hammond Alternative Option 2 would have the same impacts as described for Hammond Alternative Option 1.

Hammond Alternative Option 3

Hammond Alternative Option 3 would have the same impacts as described for Hammond Alternative Option 1.

Maynard Junction Rail Profile Option

There are no RECs specifically associated with the Maynard Junction Rail Profile Option. Note that this Option would be associated with Commuter Rail Alternative Options 1, 2, and 3, IHB Alternative Options 1, 2, and 3, and Hammond Alternative Options 1 and 2. Therefore, there would be no changes to the hazardous materials impacts presented for the applicable alternative options (i.e., NEPA Preferred Alternative, Commuter Rail Alternative Options 1, 2, and 3, IHB Alternative Options 1, 2, and 3, and Hammond Alternative Options 1).

5.2 Construction-Related Impacts

Construction activities for Project Alternatives have the potential to disturb hazardous materials that may be present within the soil and/or groundwater in the vicinity of the proposed Project in association with the identified RECs and CRECs. Additional investigation would be necessary prior to construction to verify whether hazardous materials are present in the Study Area in association with the RECs and CRECs. The following subsections describe the potential construction-related impacts associated with the Project Alternatives. **Table 5-1** summarizes AECOM's findings by alternative.

Table 5-1 Summary of Potential Hazardous Materials Impacts During Construction by Project Alternative

Alternative	Total Number of Hazardous Materials Impacts		
	High Risk RECs	Medium Risk RECs	Low Risk CRECs
No Build	N/A	N/A	N/A
Commuter Rail Alternative Options	23	22	2
IHB Alternative Options	25	18	2
Hammond Alternative Options	32	21	2
Maynard Junction Rail Profile Option	0	0	0

SOURCE: AECOM 2016.

High Risk RECs have a higher risk of affecting the Project than Medium or Low Risk RECs; however, all RECs have the potential to impact the Project. The impacts by Project Alternative are discussed further in the following subsections.

5.2.1 No Build Alternative

The No Build Alternative would not encounter any hazardous materials and/or petroleum products, as the Project would not be constructed.

5.2.2 Commuter Rail Alternative Options

All Commuter Rail Alternative Options would require ground disturbance in areas where new tracks would be laid or where stations and facilities would be constructed. This assessment identified 45 RECs and 2 CRECs located along the Commuter Rail Alternative, where AECOM has identified the potential for soil and/or groundwater located within the footprint of the proposed Project to have been impacted by contaminants from off-site or on-site sources. Thus, construction of the Commuter Rail Alternative Options has the potential to disturb hazardous materials contamination that may be present in the Study Area. Note that, with regard to hazardous materials, there are no expected environmental consequences associated with the portion of the Project extending north of Kensington Avenue to Millennium Station, as there is no new construction proposed for that portion of the Study Area and therefore there are no impacts expected to result from that portion of the Study Area. The potential impacts associated with the Commuter Rail Alternative would be the same for all four design options.

5.2.3 IHB Alternative Options

The IHB Alternative Options, like the Commuter Rail Alternative Options, would require ground disturbance in areas where new tracks would be laid or where stations and facilities would be constructed. This assessment identified 14 RECs in association with the portion of the IHB Alternative Options located north of Douglas Street. For the portion of the IHB Alternative Options located south of Douglas Street, the potential impacts would be identical to those presented above for the portions of the Commuter Rail Alternative Options located south of Douglas Street.

These RECs represent areas where AECOM has identified the potential for soil and/or groundwater located within the footprint of the proposed Project to have been impacted by contaminants from off-site or on-site sources. Thus, construction of the IHB Alternative Options has the potential to disturb hazardous materials contamination that may be present in the Study Area. The potential impacts associated with the IHB Alternative would be the same for all four design options.

5.2.4 Hammond Alternative Options

All Hammond Alternative Options, like the Commuter Rail Alternative Options, would require ground disturbance in areas where new tracks would be laid or where stations and facilities would be constructed. This assessment identified nine unique RECs in association with the portion of the Hammond Alternative Options located north of Douglas Street. For the portion of the Hammond Alternative Options located south of Douglas Street, as well as some portions of the Hammond Alternative Options located north of Douglas Street, the potential impacts would be identical to those presented above for the portions of the Commuter Rail Alternative Options.

These RECs represent areas where AECOM has identified the potential for soil and/or groundwater located within the footprint of the proposed Project to have been impacted by contaminants from off-site or on-site sources. Thus, construction of the Hammond Alternative Options has the potential to disturb hazardous materials contamination that may be present in the Study Area.

5.2.5 Maynard Junction Rail Profile Option

There are no RECs specifically associated with the Maynard Junction Rail Profile Option. Therefore, there would be no changes to the hazardous materials impacts presented for the applicable alternative options (i.e., Commuter Rail Alternative Options 1, 2, and 3, IHB Alternative Options 1, 2, and 3, and Hammond Alternative Options 1 and 2).

6. MITIGATION

6.1 Long-Term Operating Effects

Since no impacts are anticipated under the No Build Alternative, no mitigation measures are proposed. As described in **Section 5.1**, operational impacts associated with the Build Alternative are expected to be minimal because of the safety plan NICTD would employ to control regulated materials it uses as part of Project operation. NICTD's plan would establish procedures and staff training for proper use, storage, and maintenance of equipment and disposal of regulated materials. All regulated materials generated as part of maintenance would be disposed of in accordance with state and local guidelines.

6.2 Short-Term Construction Effects

No mitigation measures are proposed for the No Build Alternative since no construction-related impacts are anticipated. For any of the Build Alternatives, a Phase II ESA in accordance with applicable ASTM guidance would be conducted prior to the ROW acquisition or start of construction for properties located in the vicinity of the identified High Risk RECs. A Phase II ESA includes chemical analysis of soil, groundwater, surface water, and sediments within a potentially contaminated site. Geophysical studies including soil borings, installation of monitoring wells, and digging of test pits may be required. During the course of project planning, the alternative alignment in the vicinity of RECs would be evaluated to avoid impacts to the extent possible.

For Medium Risk RECs, their closure status or current site status would be reviewed again a few months prior to the start of any construction activities to ensure that no new activities have occurred that may elevate the risk level and that the current activities are still indicative of minimal potential for contamination from hazardous material use and/or activities. If a site's risk level changes, then a Phase II ESA may be warranted for sites currently identified as Medium Risk.

For properties that require a Phase II ESA, a Phase II ESA work plan would be developed. The Phase II work plan would outline a strategy for determining the extent of contamination, if any, across the portions of the Study Area that are located in the vicinity of a REC.

If hazardous materials were to be encountered during construction, the appropriate precautions would be taken to prevent worker exposure and to minimize the spread of contaminants into the environment. NICTD would prepare and implement a safety plan during construction that includes provisions for action if previously unidentified regulated materials are encountered during construction. The plan would include awareness training and a response plan for engineering and construction crews if signs of apparent contamination are discovered during excavations or pre-construction borings, even if the Phase I assessment indicates low probability of contamination at a given location. Engineering and construction crews would be required to immediately report apparent contamination to their supervisor who would take immediate and appropriate action to protect worker and public safety.

If inactive water wells, USTs, or hazardous materials/wastes are encountered during project planning or construction, they would be properly closed and removed in accordance with state and local requirements. Inactive water wells would be closed so as to not provide a conduit for possible groundwater contamination. If a decommissioned UST is encountered, it would be

removed in accordance with applicable regulatory requirements and confirmation soil sampling would be conducted to determine whether there has been a petroleum release. If hazardous materials/wastes are encountered within soils or groundwater during construction, the state appropriate environmental regulatory agency (IEPA or IDEM) would be contacted. If site buildings are to be demolished or renovated, asbestos and lead-based paint surveys would be conducted by a qualified contractor.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERCLIS sites within the searched area.

EXECUTIVE SUMMARY

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 8 CERC-NFRAP sites within the searched area.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

EXECUTIVE SUMMARY

RMP: When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

A review of the RMP list, as provided by EDR, and dated 08/01/2014 has revealed that there is 1 RMP site within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/16/2014 has revealed that there are 2 US AIRS sites within the searched area.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 11/11/2011 has revealed that there are 3 2020 COR ACTION sites within the searched area.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within the searched area.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 42 EDR US Hist Auto Stat sites within the searched area.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D006

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility

VERMETTE MACHINE COMPANY INCORPORATED (Continued) **1000463349**

Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004
Waste name: ARSENIC

HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

US EPA TRIS (Toxics Release Inventory System) contains information

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D016
Waste name: 2,4-D

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: P075
Waste name: NICOTINE, & SALTS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 12

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERCLIS-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 14 CERCLIS-NFRAP sites within the searched area.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 4 HIST FTTS sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/20/2015 has revealed that there are 8 US AIRS sites within the searched area.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 04/22/2013 has revealed that there are 3 2020 COR ACTION sites within the searched area.
